

The booth that turns a conversation into a client.

Event booth strategy, lead capture system and print production brief.
Internal planning document for Soma-Q and its designers and printers.

Version 0.1 | 7 October 2026

Event: Saturday, October 24, 2026

Prepared for Megan McDonald, Founder

One message, one action, two paths.

The booth does three things in order: stops a person walking past, starts a real conversation, and captures a contact that can be followed up within a day. Everything printed serves one of those jobs, or it is not printed. The event is Saturday, October 24, 2026, seventeen days from the date of this document, so the timeline in the order guide is part of the plan.

Goals

Grow the email list and the contact list (both, with consent), and book free discovery calls from the best conversations.

Audience

Adults only. High-performing leaders, mostly men at this event, plus owners and HR or team leads. You are a regular sponsor, so some visitors already know you.

Budget

\$500 to \$1,500 for printing and swag combined. Spend concentrates on what people see and scan, not on giveaways.

The six rules this package follows

- **One headline, readable in three seconds.** A question about stress, with the outcome underneath. No service lists on the banner.
- **Four free first steps, always the same four.** Burnout Signal Check, the free ebook, the weekly reset, and a free discovery call. Each has its own QR on the banner, the counter sign and the card, and each is tagged so we can see which one people choose.
- **Scanning must work at standing height.** QR codes sit at roughly chest height on the banner, on the counter and in the hand, never on the floor-level table front or the backdrop.
- **Earn the swag.** Everyone who talks to us gets a card, which is cheap and useful. A premium keepable goes only to people who give a contact or book a call, so every unit of spend is tied to a lead.
- **Capture before they walk away.** The capture tap or scan happens during the conversation, not after, because intent fades the moment they turn the corner.
- **Track every printed piece.** Each QR carries its own tag (banner, sign, card, organizations sheet), so after the event we know which piece actually produced scans.

What is in this package

Piece	Job	Trim size	File
Retractable banner (two versions)	Stop people. Ask the question. Four free scans.	32 x 80 in	banner_retractable.pdf, banner_retractable_photo.pdf
Backdrop (two versions), optional	Brand wall behind the table. Question headline, four areas pressure shows up. No QR.	120 x 90 in placeholder	backdrop.pdf, backdrop_photo.pdf
Table front panel	Brand recognition from the aisle. Names both paths. No QR.	72 x 30 in (confirm with vendor)	table_front.pdf
Four explainer posters	Make "nervous system alignment" understandable in plain pictures: the loop, the shift, what changes, and a dot-sticker body map.	24 x 36 in	poster_loop.pdf, poster_shift.pdf, poster_outcomes.pdf, poster_where.pdf
Counter sign	Four free first steps plus the POPL tap or scan.	8.5 x 11 in, acrylic stand	counter_sign.pdf
Take-home card	A card people keep: the Pressure Loop on the front, four scans on the back.	4 x 6 in, two sided	card_individual.pdf
Organizations one-sheet	A page an owner or HR lead can forward internally.	8.5 x 11 in	sheet_organizations.pdf
Business card	New card with a QR to book a free discovery call.	3.5 x 2 in, two sided	business_card.pdf

All print files include bleed and are built from `build/config.py`. The official logo, your photo and the POPL QR image are dropped into `assets/` and the files rebuild in seconds. The lead tracker is `lead_tracker_template.csv`. Where to buy each item, what it costs, and when to order by is in the separate Order Guide.

Most people walking by have never heard of this.

A man at a summit, between sessions, coffee in hand, has not heard the phrase "nervous system alignment" and has no reason to care about it yet. He does know what a short fuse feels like, what three hours of bad sleep does to a Tuesday, and what it is to be good at the job and tired of it. The booth earns his attention in his words first, and introduces ours only after he is already nodding.

Translate before you print or say anything

Our term	What a stranger hears	Say this instead
Nervous system alignment	Vague wellness language	"Training your response to stress."
Nervous system literacy	Jargon	"Knowing what your body is doing under pressure, and how to shift it."
Regulation	A clinical or technical word	"Coming back down after the spike."
Dysregulation	A diagnosis	"Running on depletion." (Keep the quiz result labels on the quiz, not on the booth.)
Somatic	Something to do with yoga	"Body-based."
NeuroSoma Axis, Triad Intelligence Model	Nothing yet	Hold these back for the conversation or the follow-up. The booth shows the loop, the shift and the outcomes.
SQ-LPMS, SQ-M, SQ-C	Nothing	Individuals: "a weekly check-in, so you see your progress in your own numbers." Organizations may see the SQ- names on the one-sheet.

Three lengths of the same explanation

Five seconds (the banner)

"What if you could train your response to stress?" Outcome underneath: restored energy, focused clarity, and joy under pressure.

Thirty seconds (you, speaking)

"Most leaders I meet are good under pressure and paying for it later: short sleep, a short fuse, fog by mid-afternoon. When pressure hits, the body can stay braced, and the mind speeds up to match. I teach people to notice that and shift it, and we track it weekly so you can see it working. As Founder of Soma-Q, a nervous system alignment practice, I help high-performing leaders move from burnout to leading with energy, clarity and joy under pressure."

Two minutes (with the posters)

Walk the four visuals in order: the loop (what is happening), the shift (what to do about it), the outcomes (what changes), the body map (let them find it in themselves). Each one answers a single question a stranger would ask.

The four visuals: one question each

Poster (24 x 36 in)	Question it answers	What a stranger takes from it
The Pressure Loop	"What is actually happening to me?"	Pressure makes the body tighten, the mind speed up and the reaction feed the tension again, and there is a point where it can be interrupted. Rest alone does not touch this loop.
The Soma-Q Shift	"What would I do differently?"	Three questions: Notice, Locate, Choose. Concrete enough to try before leaving the booth.
What Changes	"What do I get out of it?"	Restored energy, focused clarity, and joy and fulfillment, held under pressure.

Where do you feel it first?

"Is this about me?"

An interactive body map. A dot sticker is a low-commitment reason to stop, and it opens the conversation without a pitch.

All four carry a small QR to the Burnout Signal Check, tagged by poster, so we can see which visual people scan from. The same loop is on the front of the take-home card.

▲ WHAT CAME FROM YOUR DRIVE, AND WHAT DID NOT

Rebuilt in the new brand, or left behind on purpose.

I opened your Social and Marketing folder and the Marketing Images folder inside it. Every graphic I looked at is in the old copper and teal look, and several carry language the new rules retire. I rebuilt the concepts rather than recoloring the files, because the structure of each one needed to change for a stranger.

Drive file	Decision	Why
somaq_pressure_loop_horizontal.png	REBUILT as Poster 1, and on the card front	Same four ideas and the same "interrupt here". Redrawn as a triangle so it echoes the Soma-Q mark, with a plain-language line under each step, and the copper removed.
Nervous System Shift / NS Activation to Shift	REBUILT as Poster 2	The original shows five stages plus a three-lens model on one page. For a stranger I kept the three questions (Notice, Locate, Choose) and your closing line. The IQ, EQ and SQ lens and the old footer ("Nervous System Performance Coaching for Leaders") are left out; "coaching" is retired.
SomaQ_Outcomes_Circle.jpg	REBUILT as Poster 3	The original is a one-hour outcomes wheel for clinicians and practices (clinician retention, practice culture), so it speaks to a different audience. Rebuilt around your three outcomes for leaders.
Soma-Q_Breath_Retention_Graphic.png	LEFT OFF THE BOOTH	Three reasons: your rules say never single out breathwork as the offer; it makes physiology claims (oxygen delivery, circulation, stamina) that each need a verified source before public use; and it carries its own safety caveat. It suits a workshop or the platform, where the caveat and citations can sit beside it.
Soma-Q_Flyer_HalfSheet.png, Soma-Q_Ideal_Client.png, somaq_postcard_v4.png	DO NOT REUSE	They show "Founder & CEO" (the title is Founder only), "INTELLECTUAL" for IQ (the term is Cognitive), the line that sustained activation "is dangerous" (an unsupported claim), and the retired copper. They are useful as a record of what worked, not as print files.
Yerkes-Dodson curve, Window of Tolerance, Network Physiology, PNIE, Body to Brain Paradigm and the rest	NOT USED	Several look like third-party or stock images, so I did not reuse them without knowing their licensing. They also assume a reader who already knows the vocabulary. I can make a plain-language version of any one you want at a later booth.

How the dot-sticker poster works

Put the body-map poster on an easel at the front corner of the table, with a sheet of 3/4 inch round stickers beside it. Anyone can place a dot without talking to you. Your opening question to anyone who does is "What do you do next when it shows up?", which leads straight into the loop. This is my recommendation, not something I found evidence for; the earlier evidence table already notes that claims about interactive booths are weakly supported, so count how many people place a dot and how many of those start a conversation, and keep it only if the numbers justify it.

Before the event: buy two colors of stickers (one for "me", one for "someone on my team", which doubles as the individual versus organization signal), a tabletop easel for each of two posters, and foam board or a similar mount for the other two if you will tape them to a wall or the backdrop. I have not found poster printing prices, so ask the printer for a quote on 24 x 36 in prints and mounting.

Language check on the new visuals. The posters use "built to restore" and "designed to build", not promises. They do not say research proves anything, do not name breathwork, and do not use clinical or coaching language. "Pressure runs in a loop" is a plain-language framing taken from your own Pressure Loop graphic; if you want a research-supported statement of the mechanism on a printed piece, tell me and I will check it against the research citations master first.

▲ WHAT THE EVIDENCE SAYS

Researched, with the confidence level stated.

I searched for evidence behind each major booth decision. Much of what circulates is vendor marketing repeated without a primary source, so each finding is rated by how well it is actually supported. Please verify anything you plan to quote externally.

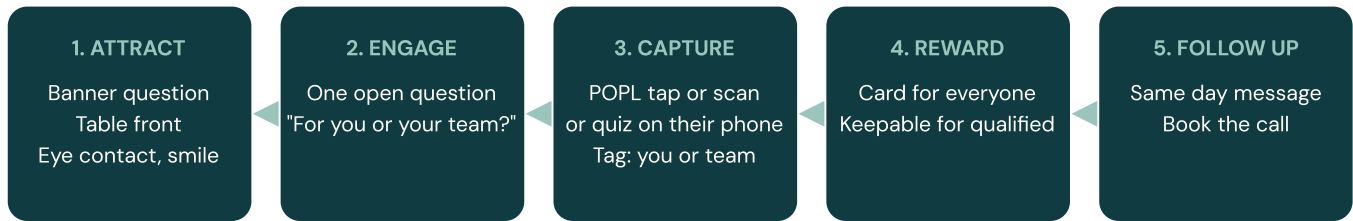

Question	What I found	Support	How we use it
Does fast follow-up matter?	The most cited speed finding is a 2011 Harvard Business Review study with MIT and InsideSales.com, reported through secondary sources, finding firms that contacted web leads within an hour were nearly seven times as likely to qualify them. It studied online leads, not event leads. Event-specific multipliers (3x, 6x, 9x) appear widely without sources.	MODERATE	Follow up the same day, and no later than 24 hours. Treat the exact multiplier as unproven.
Do most event leads go unfollowed?	A figure of roughly 80% never followed up is attributed to CEIR across many blogs, but I could not find the original report, and other sources give 70% or 20%. A 2013 CMO Council and E2MA survey reported only 6% of respondents said they converted tradeshow leads extremely well.	WEAK	Internal caution only. Do not quote the 80% figure publicly. The practical lesson, a written follow-up plan, stands either way.
Do promotional products work?	ASI's own studies (an industry trade body, so not independent) report about 85% recall of the advertiser, and that apparel and outerwear are kept longest. Item rankings differ between ASI editions (for example calendars rank last in one and longest in another). Pens and similar items are kept for months, not years.	MODERATE	Skip generic giveaways. Spend on one useful, visible keepable, and only for qualified contacts.
Does the three-second headline rule hold?	It is a design heuristic repeated by booth builders, not a measured finding. The advice is consistent: one headline stating the outcome, at eye level, with the primary message above crowd height.	HEURISTIC	One large question headline in the upper third of the banner.
Does interaction raise dwell time?	Directionally plausible and widely claimed. Multipliers such as 3 to 5 times and 50% more traffic cite no methodology. Baseline dwell at static booths is reported as roughly 10 to 60 seconds, also unsourced.	WEAK	The quiz on the visitor's own phone is the interaction. Measure our own dwell and conversion instead of relying on these numbers.
Can POPL and Nimble capture leads?	Popl states that it supports NFC and QR sharing, custom lead forms with consent boxes and qualifying questions, offline capture, card scanning, and sync to Salesforce, HubSpot, Zoho, Outlook and Zapier. Nimble documents an AI business card scanner in its mobile app and lists tags, smart lists and email sequences, though I could not confirm tags or sequences can be managed from the phone.	VENDOR CLAIMS	Popl is the primary capture tool. Nimble is the contact system of record. See the capture section for the verification list.

Plain conclusion. No source I found proves a specific booth design wins. The defensible strategy is the one that is cheap to test: put a different tag on each printed piece, capture every conversation the same way, and keep only what produced leads at the next event.

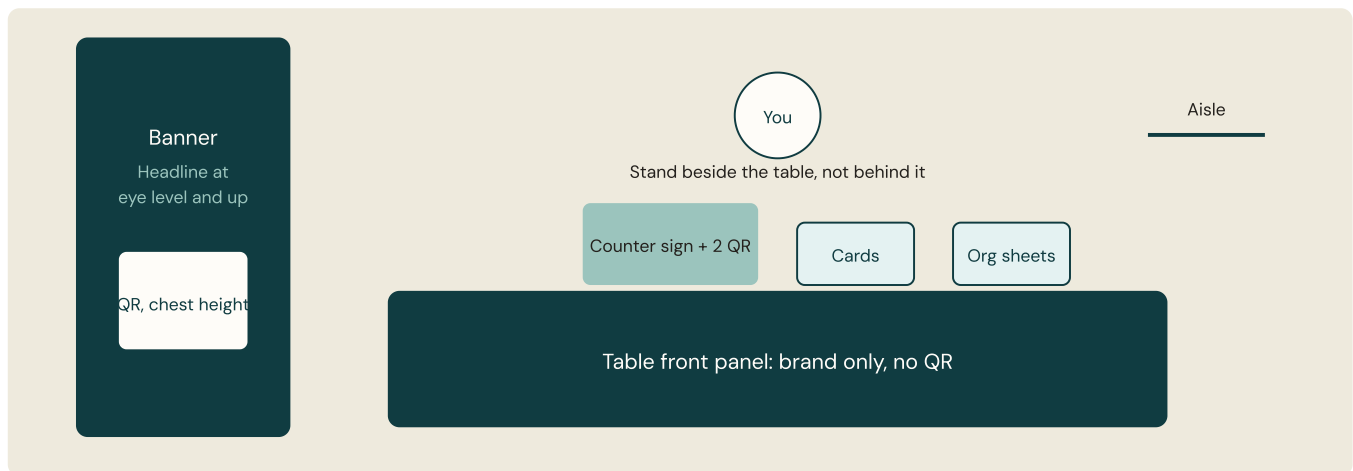

▲ STRATEGY

The conversion path.

Five steps, each with one job and one owner. The diagram shows where each printed piece and each tool sits.

Booth anatomy: where each piece goes

Stand to the side of the table. People approach an open space more readily than a barrier; this is common booth practice rather than a measured finding.

Written for how this audience talks

Design stays neutral so the booth reads as inviting to anyone, and the language does the work of connecting with men: direct sentences, the physical and practical signals (sleep, tension, heavy decisions, a short fuse), and the framing of pressure as something trainable. There is no self-care, glow or journey vocabulary on any piece. If the event data later shows an audience that is overwhelmingly men, a second card with one men-focused headline is a small, low-risk addition, and I would test it against the neutral card rather than replace it.

▲ MATERIALS AND BUDGET

Spend where people look and scan.

The budget is \$500 to \$1,500 for print and swag together. I did not look up current prices, so the shares below are planning allocations to take into quote requests, not quotes. Get at least two quotes for each line and ask each vendor for a printed proof.

Line	Planning share	Notes
Retractable banner and table front panel	30% to 35%	The largest line, because it does the stopping. Ask for the vendor template before final export, and a printed color proof of the Deep Teal.
Cards and organizations sheets	10% to 15%	Order the cards in a quantity you will realistically hand out; leftovers are not a saving. Order the one-sheets in a short run, as they go only to organizational leads.
Four 24 x 36 in posters, foam board, easels, dot stickers	15% to 20%	I did not find poster prices; get a quote. If the total runs over, print two (the loop and the body map) and show the other two as card-size handouts.
Counter sign and acrylic stand	5% to 8%	Cheap and high leverage. It carries both QR codes and the POPL instruction.
One earned keepable	15% to 20%	For qualified contacts only. Quantity equals the number of qualified conversations you expect plus a small buffer; at an unknown attendance, start with a number you can afford to run out of.
Holdback	10%	Rush fees, a reprint after a proof error, shipping, tape and a spare QR sign.

What I recommend you do not buy

These are my judgment calls from the evidence above and general booth practice, not findings: tri-fold brochures (they get recycled and cannot be tracked), generic pens and stress balls (short-lived, and a stress ball sends the wrong message for a nervous system practice), a long list of services on the banner, and any piece without a scannable next step.

The earned keepable: decision for you

The strongest evidence in the promotional products literature is for items that are used often and seen by others, such as apparel, outerwear and drinkware, which the ASI studies report are kept longest. Those cost more per unit, which is why they are reserved for people who have given a contact or booked a call. Two options fit the budget; I would choose after you have the unit prices.

Option A: drinkware

Daily use and visible to colleagues. Mid cost per unit. Subtle logo and the URL only.

Option B: reset card set

A small set of practice cards from the Practice Library, chosen to be used at a desk. Lower cost per unit, and on message. Needs practices selected and verified against the citations master before printing.

Brand and print rules for every piece

- Six colors only: Deep Teal #103C41, Light Teal #9BC4BD, Pale Teal #E4F2F2, Linen #EEEADD, Card White #FEFCF8, Ink #24211D. No gold, no copper. I did not convert these to CMYK or Pantone because I could not verify a match; ask the printer to match Deep Teal and approve a proof.
- DM Serif Display for headings and DM Sans for body. Outline or embed fonts when exporting for print.
- Official logos only, from the UPDATED SEPT 2026 LOGOS folder. Reversed logo on Deep Teal, teal logo on Linen or white.
- Trademark marks on first use per piece (Presence Under Pressure™ appears on the organizations sheet).
- No em dashes or en dashes, no coaching or clinical language, outcome-first headlines.

How POPL, Nimble and the quiz fit together.

Three capture routes feed one list. The aim is that every contact lands in Nimble with the same two tags, regardless of how it was captured.

Route	What is captured	Where it lands
1. Burnout Signal Check QR	First name, email, result tier, answers	The quiz's current capture (a Google Form per the website handoff). Needs a path into Nimble.
2. Free ebook QR	First name, email	The ebook signup (/api/ebook-signup, which the designer still has to build), then the PDF opens.
3. Weekly reset QR	Registration details, depending on where the QR points	Zoom registration or the Free Resources page. Decide which; registration is better because it captures an email.
4. Free discovery call QR	Name, email, time slot	Acuity booking, then Nimble. Highest intent: follow up first.
5. POPL tap or scan	Name, email, optional phone, for me or my team, consent	POPL, then a sync to Nimble (see checks below).
6. Paper cards and badges	Name, title, company, email, phone, address	Nimble directly, using the mobile business card scanner.

Launch dependencies. Four of these routes depend on the new site being live on soma-q.com by about October 19, so that every printed code can be scan-tested from a real proof: the /go/ redirects, the Burnout Signal Check, the ebook signup, and the contact form. The website handoff lists the ebook signup and contact form as items the designer still has to build. If any of them will not be ready, tell me and I will change that QR to a fallback destination before you print.

Tags to apply to every lead

Source tag

oct24 plus the route: quiz, ebook, reset, call, popl, card.
(Matches the campaign slug in the QR links.)

Segment tag

individual or organization. The POPL qualifier and your own note after a conversation set this tag.

Setup checklist, do all of it before the event

- **POPL lead form.** Fields: name, email, "I am here for: myself / my team / just learning", an optional phone number, and a consent checkbox for email follow-up. Add a separate, unchecked consent for text messages if you intend to text.
- **POPL to Nimble.** POPL lists Salesforce, HubSpot, Zoho, Outlook and Zapier as sync options and does not list Nimble by name in the sources I found. **Verify** whether a Zapier connection to Nimble exists on your plans, and test one lead end to end. If it does not, plan to export the POPL leads to a spreadsheet the same evening and import them into Nimble.
- **Quiz to Nimble.** The quiz posts to a Google Form. Decide whether Nimble imports from that sheet, or whether your platform build replaces the quiz capture with a direct lead capture. Until then, plan a manual import on the same evening.
- **Nimble tags and sequences.** Create the tags and the five-message follow-up sequence on the desktop site ahead of time. I could not confirm they can be managed from the phone app, so do not plan to build them at the booth.
- **Test on the real devices.** Reviewers report NFC tap problems on some older phones, so the counter sign always carries the QR as well as the tap instruction. Bring a charger and a battery pack, and confirm offline capture works without venue wi-fi.
- **Test every QR** on a phone on cell data, from the printed proof, before the final print order. The quiz and contact routes must be live on the final site.

Consent. Collect email only with an explicit opt-in, and get a separate opt-in before sending marketing texts (ask your attorney to confirm the wording and your obligations). The quiz is for adults 18 and older, and the event is adults only, so no minors-specific handling is built into the booth.

Conversation script and follow-up.

Open with a question, not a pitch

- "What part of your week runs you down the most?"
- "When the pressure spikes, what do you notice first: your body, your head, or your temper?"
- "Is this something you are dealing with yourself, or for a team you lead?"

Then, in this order

1. Listen for one specific cost (sleep, decisions, a short fuse, energy by mid-afternoon).
2. Name it back in one plain sentence, tied to the outcome: restored energy, focused clarity, joy under pressure.
3. Offer the next step that fits: the quiz for an individual, the overview for an organization.
4. Capture it right there: "Tap my phone and I will send it to you now."
5. Give the card. If it is a real conversation, offer the keepable and book the call on the spot.

Stay inside the scope

Soma-Q is an education and training practice. In conversation: do not diagnose, do not promise results ("clients report" and "designed to" are the verbs), and do not describe the work as therapy or treatment. If someone describes a medical or mental health crisis, listen, say this is outside what you do, and point them to a licensed provider.

Credibility in one line

"I am the Founder of Soma-Q, a nervous system alignment practice. Before that I spent thirteen years as a healthcare technology executive."

Follow-up cadence

When	What
Same day	Short email or text: nice to meet you, the thing we talked about, the link they asked for.
Day 1 to 2	The Burnout Signal Check link if they have not taken it, or the organizations overview.
Day 4	One useful idea, not an ask.
Day 8	Invite to the weekly Shift Happens reset (Wednesdays, 12:00 PM Mountain).
Day 14	Direct invitation to book a discovery call.

The speed target of a same-day first touch rests on moderate evidence (see the evidence table). The remaining timing is my recommended starting cadence and is meant to be adjusted after the first event.

How we will know it worked.

I am not setting numeric targets, because I could not find a trustworthy benchmark for a first-time booth in this category and an invented one would mislead you. Record these, then set targets for the second event from your own results.

Measure	How to get it
Conversations held, leads captured, capture rate	Tally sheet at the booth; leads from the tracker
Leads with a valid email and consent	Tracker columns
Scans per printed piece	The quiz and contact links carry <code>utm_content</code> per piece (banner, sign, card, orgsheet)
Calls booked, calls held, clients signed	Acuity and Nimble, at 7, 30 and 90 days
Cost per lead and cost per booked call	Total print and swag spend divided by each count

Decision rule for next time: keep a printed piece only if its tag shows scans or if conversations point to it; drop or redesign any piece with neither.

Specifications.

Piece	Trim and bleed	Notes for the printer
Retractable banner	32 x 80 in trim (FedEx's listed size), file at 33 x 81 in (0.5 in bleed). Confirm against the vendor template.	Keep the lower 12 in free of critical content, as the base hides it. The headline sits at roughly 47 to 70 in from the floor. The four QR codes are about 9 in square each including their border, and sit roughly 20 to 50 in from the floor. Request a color proof of Deep Teal.
Backdrop (optional)	120 x 90 in placeholder, file at 121 x 91 in. Confirm against the vendor template (frame, curve, panel seams).	All critical content sits in the top 45 in, above the table and the crowd. No QR on this piece.
Explainer posters (4)	24 x 36 in trim, file at 24.25 x 36.25 in (0.125 in bleed). Portrait.	Satin or matte paper. Mount two on easels (foam board) and hang or tape the others. Each carries a small QR in the lower right.
Table front panel	72 x 30 in trim as a placeholder, file at 73 x 31 in. Confirm against the vendor template (seams and folds).	No QR on this piece by design. Check which part of the cover is visible when the table is set up.
Counter sign	8.5 x 11 in trim, file at 8.75 x 11.25 in (0.125 in bleed).	Matte stock or acrylic stand with matte insert, so lighting does not glare over the QR codes.
Take-home card	4 x 6 in trim, file at 4.25 x 6.25 in. Two sides.	Heavier card stock, matte or soft-touch. Avoid gloss over the QR.
Business card	3.5 x 2 in trim, file at 3.75 x 2.25 in. Two sides.	Soft-touch or matte, and no gloss over the QR. Keep text 0.2 in from trim.
Organizations sheet	8.5 x 11 in trim, file at 8.75 x 11.25 in. One side.	Standard heavyweight paper is sufficient.

QR codes

- All codes are vector, Deep Teal on white, error correction level M, with a quiet zone. Do not recolor, stretch or place over imagery.
- Minimum print size: keep every code at or above the size supplied. The take-home card codes are 1.18 in square and the business card code is 0.88 in.
- URLs are generated from `build/config.py` and listed in `output/qr_urls.txt`. Change the campaign slug per event. The default mode points every code to a stable `soma-q.com/go/` address; the redirect list for your designer is in `output/redirects_for_designer.md`.
- Because a printed QR cannot be edited, point it at a stable address on `soma-q.com` that you can redirect later. If the final routes differ from the working ones in the config, rebuild before printing.

Proof checklist before approving any print order

- Event name, dates and booth number replaced everywhere a placeholder appears. Search each PDF for the character "[".
- Official logo present on every piece. Colors match Deep Teal on the printed proof.
- Every QR scanned from the printed proof on two different phones.
- No text within 0.375 in of trim (0.25 in on the card). Fonts embedded.
- No em dashes, no coaching or clinical language, trademark marks present on first use.

The photo question

Your hesitation is reasonable and it is a choice, not a requirement. I found no study showing a founder's photo raises conversion at a booth, so this is my judgment. The new website opens with a photo, so a photo on the backdrop keeps the booth consistent with the site and helps returning contacts recognize you. A banner is read from distance in three seconds and works as well on its question alone. My recommendation: no photo on the banner, and a photo on the backdrop only if you are comfortable with a very large image of yourself. I built both versions of each so you can compare them side by side.

The new business card

Front: Deep Teal with the reversed logo and "Burnout ends here." Back: your name, title (Founder only), a one-line descriptor, email, website, an optional phone number, and a QR to book a free discovery call. The QR is the point of the card: a printed card with no scan path is the piece most likely to be forgotten.

Open decisions and items to verify.

Item	Status
Booth size and any sponsor deadlines	Only needed to confirm the table and backdrop sizes with the vendors. The print pieces carry no event name, so they can be reused.
Photo on the banner and backdrop	Your call. Both versions are built; see the photo note below.
Phone number on the business card	Decided: it prints. I used 303-717-9995 from the website Terms page; confirm it.
Official logo and your photo	Taken from the new website files for proofing. They are web resolution, so the banner and backdrop need the original large files from Drive before final export.
POPL QR image	Needed in assets/ . Export it from the POPL app.
Final website routes for the quiz and the organizations contact path	The working URLs come from your website handoff. Confirm they are live after the Replit migration.
POPL to Nimble sync	Verify the connection and test it with one lead.
Vendor templates for banner and table cover	Required before final export.
Earned keepable (drinkware or reset cards)	Your decision after unit pricing. Reset cards need practices chosen from the Practice Library and checked against the research citations master.
Booth-only offer for organizations (for example a short team session)	Optional; not included in the printed pieces.

Sources.

I retrieved these through search and did not read every one in full. Several are vendor blogs; the statistics in them vary and should be checked against primary sources before being quoted.
