Most wellness programs report attendance. We ask: did the capacity change?

How Soma-Q makes your capacity under pressure visible, week by week, with the SQ-LPMS.

Participation counts and satisfaction surveys tell you who showed up and whether they liked it. They do not tell you whether you, or the people you lead, are recovering faster between demands, staying steadier in a hard conversation or following through under load. Soma-Q builds those capacities through training and practice, so it measures them too, every week, from the first session to the last.

> **What happens to your capacity to lead when pressure rises, and can that capacity be trained?**

One system, two separate measures

The SQ-LPMS (Soma-Q Leadership Progress Measurement System) tracks progress over time. It does not grade people. It keeps two things apart on purpose, so a strong quarter of results cannot hide growing strain, and a slow start on results is not mistaken for a lack of capability.

THE CAUSE

SQ-M

Soma-Q Method Metrics. Is the method landing in the body and nervous system? Five capacity measures.

THE EFFECT

SQ-C

Soma-Q Leadership Competencies. Is the change showing up in how people lead? Five competency measures.

How the data is collected

BASELINE	WEEKLY	ROLLUPS	REPORT	ADJUST
Soma-Q Assessment at the start	Soma-Q Weekly Check-In, under five minutes	SQ-M and SQ-C, trended separately	Progress in plain, usable language	Facilitation follows the data

Every item is rated from 0 to 10, and higher always means better, so a rising line is always good news and nothing is scored in reverse. The same questions are asked every week, which turns impressions into a trend line. Each participant receives their own Soma-Q Metrics Report in plain language.

What a summary can look like

Average score, 0 to 10	Week 1	Week 6	Week 12
SQ-M, capacity	4.6	5.9	6.8
SQ-C, leadership competencies	5.2	5.6	6.4

Illustrative example of the format only; not client data. Here capacity moves first and leadership competencies follow, the pattern the method is designed around. A real report pairs the numbers with plain statements of what changed and what to focus on next.

Soma-Q is an education and training practice. It does not diagnose, treat or manage any condition, and no score is a medical or psychological measure.

▲ WHAT IS MEASURED

Ten measures, read as cause and effect.

SQ-M, Soma-Q Method Metrics (capacity)	
Regulation Capacity	How readily a person returns to steady after stress
Somatic Awareness	How early they notice the body's signals of pressure
Emotional Load	How steady they stay under the week's emotional weight
Embodiment Consistency	How consistently they practice between sessions
Joy Activation	How often they find moments of meaning and fulfillment

SQ-C, Soma-Q Leadership Competencies (outcomes)	
Communication Effectiveness	Clear, aligned communication in meetings, messages and decisions
Follow-Through + Execution	Keeping commitments when demand is high
Capacity Management	Time and energy going to what matters most
Visibility & Influence	Showing up and leading where it counts
Impact Generation	Tangible outcomes: decisions made, progress delivered

What the reports show

- ▲ Baseline and current SQ-M and SQ-C rollups, side by side and never merged into one score
- ▲ The trend over the engagement, so you see the direction rather than a single snapshot
- ▲ Practice consistency, for one person or across a team
- ▲ Where capacity is strengthening and where it is still under load
- ▲ Recommendations for keeping the gains, for you and for your team or company

For team and organizational engagements, what is reported at group level, and what stays private to each participant, is agreed in writing when the work is scoped.

What Soma-Q will and will not claim

- ▲ Weekly scores are participants' own ratings of their experience. They are a record of change over time, not a medical or physiological measurement.
- ▲ The SQ-LPMS is Soma-Q's own system and has not been independently validated. Reports describe what scores did, never what they prove.
- ▲ Soma-Q does not promise a percentage reduction in burnout, turnover, absenteeism or healthcare cost, and does not claim to prove the cause of enterprise outcomes.
- ▲ Every participant is different; not everyone will see the same change.

Let's decide what to measure for you.
