SOMA-Q

The booth that turns a conversation into a client.

Event booth strategy, lead capture system and print production brief.
Internal planning document for Soma-Q and its designers and printers.

Version 0.1 | 7 October 2026
Event: Saturday, October 24, 2026
Prepared for Megan McDonald, Founder

▲ THE PLAN ON ONE PAGE

One message, one action, two paths.

The booth does three things in order: stops a person walking past, starts a real conversation, and captures a contact that can be followed up within a day. Everything printed serves one of those jobs, or it is not printed. The event is Saturday, October 24, 2026.

Goals

Grow the email list and the contact list (both, with consent), and book free discovery calls from the best conversations.

Audience

Adults only. High-performing leaders, mostly men at this event, plus owners and HR or team leads. You are a regular sponsor, so some visitors already know you.

Budget

$500 to $1,500 for printing and swag combined, tiered so the essentials fit and the rest is optional.

The rules this package follows

- **The big pieces tell the story; the table takes the scan.** The banners and backdrop carry the question, what Soma-Q does, the loop and how to interrupt it, and the outcomes. They carry no QR codes. The counter sign, the cards and the leave-behind carry the scans.
- **A stranger can say what you do after five seconds.** Every large piece states it in plain words, in dark type on a light field.
- **Outcomes lead.** Every headline is an outcome or a question about one; mechanism and proof follow.
- **Four free first steps, always the same four.** Burnout Signal Check, the free ebook, the weekly reset, and a free discovery call, each tagged so we can see which one people choose.
- **Light fields, deep type.** Large prints use Linen with Deep Teal type and a small band of Deep Teal for the logo, because large solid dark fields reproduce less reliably and read poorly under venue lighting (see the print and lighting section).
- **Earn the swag.** A card for everyone who talks with you; anything premium only for people who give a contact or book a call.
- **Capture during the conversation, track every piece.** Each QR carries its own tag so the second booth can be better than the first.

What is in this package

Piece	Job	Trim size	File
Banner 1: the story	The question, what Soma-Q does, the Pressure Loop and where to interrupt it. No QR.	32 x 80 in	banner_story.pdf
Banner 2: the proof (two versions)	The outcomes, a weekly-progress example, and who is behind the work. With or without your photo. No QR.	32 x 80 in	banner_proof.pdf, banner_proof_photo.pdf
Table cover front	"Burnout ends here." and what Soma-Q does, in dark type on Light Teal. No QR.	72 x 30 in (confirm with vendor)	table_front.pdf
Backdrop (two versions), optional	The whole story on one wall: question, loop, outcomes, and who is behind it.	120 x 90 in placeholder	backdrop.pdf, backdrop_photo.pdf
Six posters	Loop, the Soma-Q Shift, what changes, a dot-sticker body map, the weekly progress view, capacity before results.	24 x 36 in	poster_loop, poster_shift, poster_outcomes, poster_where, poster_progress, poster_capacity
Counter sign	What Soma-Q does, four free first steps, and the POPL tap or scan.	8.5 x 11 in	counter_sign.pdf
Take-home card	Front: where do you feel pressure first. Back: the loop and four scans.	4 x 6 in, two sided	card_individual.pdf
Working with Soma-Q	Two-sided leave-behind: for you (programs, measurement, credentials) and for your team (engagements, measurement).	8.5 x 11 in, two sided	leavebehind.pdf
Measurement at a glance	Organizational leave-behind built from the Measurement Overview.	8.5 x 11 in, two sided	handout_measurement.pdf

Business card	Light front; deep back with a QR to book a free discovery call.	3.5 x 2 in, two sided	business_card.pdf

All print files include bleed and are built from `build/config.py` and the shared art in `build/art.py`. The lead tracker is lead_tracker_template.csv. Where to buy each item, what it costs and when to order by is in the Order Guide.

▲ THINK LIKE A BUYER

What someone about to spend real money needs to know.

A leader or an HR buyer deciding on a premium, multi-month service does not decide at a booth; they decide whether to take the next step. Each question below has to be answerable by something they can see, scan or take away. The last column is where the package is still thin.

The buyer asks	The plain answer the booth gives	Where it shows	Still thin
What exactly do you do?	Nervous system training that teaches high-performing leaders and teams to notice pressure early and shift out of it, so energy, clarity and joy hold up.	Both banners, table cover, counter sign	None
Is it for someone like me?	The common thread is pressure, not job title: health, wealth, relationships, career.	Leave-behind, front	No example of a person like them
What will change?	Restored energy, focused clarity, and joy and fulfillment, held under pressure.	Banner 2, outcomes poster, leave-behind	No real client numbers yet
How does it work? Is it soft?	The loop, then three questions: notice, locate, choose. Short daily practices. Weekly measurement.	Banner 1, loop and shift posters	The research line is not printed; see below
How long, and how much of my time?	Four weeks, sixteen weeks (recommended) or twelve months; practices of five to twenty minutes a day.	Leave-behind, front	Price
How will I know it is working?	A weekly check-in and a Metrics Report: your own numbers, week by week, baseline to now.	Progress poster, banner 2, leave-behind	Examples only; labeled as such
Why should I trust you?	Thirteen years as a healthcare technology executive, RYT-500, certified and accredited through SOMA Breath, and a founder who rebuilt after burnout.	Banner 2, backdrop, leave-behind, one testimonial	Three more approved testimonials are unused
Is this therapy? Is it safe?	Education and training, not treatment, and it complements medical and mental health care.	Every piece's small print, leave-behind	Needs a spoken answer
What does it cost, and what if it does not work?	Not printed. Programs are scoped on a free discovery call, and weekly measurement shows early whether it is working so the plan can change.	Leave-behind note	**The biggest gap: see below**
What is the first step, and is it low risk?	Four free first steps; the discovery call carries no obligation.	Counter sign, card, business card	None
(Organizations) How do I justify it, and what will you not promise?	Baseline first, weekly measurement, a final report; no promised percentage change in burnout, turnover or cost; group versus private reporting agreed in writing.	Leave-behind back, measurement handout	No organizational case study yet

The biggest gap: price and what happens if it does not work

At a premium price point the first thing a serious buyer wants is a range, and the second is what you do if it is not working. The booth deliberately prints neither, because I do not know your pricing or your policy and should not invent them. What I recommend is deciding, before October 24, the one sentence you will say when asked, for example: "Programs are scoped to your situation; you will have a clear

number on the discovery call, and the first step is free." If you would rather show a starting range or a payment option, tell me and I will add it to the leave-behind.

Two smaller gaps

- **Research.** Your rules allow "built on research-supported practices for nervous system regulation" without a printed citation, provided each kind of claim has a Verified row in the Research Citations Master. I did not check that master from here, so the sentence is not printed. If you want it on the banners or the leave-behind, I will confirm the rows first.
- **Proof from real clients.** Everything quantitative on the booth is labeled as an example. After October 24, asking two or three clients for permission to share de-identified reports, as your website notes already allow, would give next time's booth its strongest piece.

▲ START FROM THE STRANGER

Most people walking by have never heard of this.

A man at a summit, between sessions, coffee in hand, has not heard the phrase "nervous system alignment" and has no reason to care about it yet. He does know what a short fuse feels like, what three hours of bad sleep does to a Tuesday, and what it is to be good at the job and tired of it. The booth earns his attention in his words first, and introduces ours only after he is already nodding.

Translate before you print or say anything

Our term	What a stranger hears	Say this instead
Nervous system alignment	Vague wellness language	"Training your response to stress."
Nervous system literacy	Jargon	"Knowing what your body is doing under pressure, and how to shift it."
Regulation	A clinical or technical word	"Coming back down after the spike."
Dysregulation	A diagnosis	"Running on depletion." (Keep the quiz result labels on the quiz, not on the booth.)
Somatic	Something to do with yoga	"Body-based."
NeuroSoma Axis, Triad Intelligence Model	Nothing yet	Hold these back for the conversation or the follow-up. The booth shows the loop, the shift and the outcomes.
SQ-LPMS, SQ-M, SQ-C	Nothing	Individuals: "a weekly check-in, so you see your progress in your own numbers." Organizations may see the SQ- names on the back of the leave-behind and on the measurement handout.

Three lengths of the same explanation

Five seconds (the banner)

"What if you could train your response to stress?" Outcome underneath: restored energy, focused clarity, and joy under pressure.

Thirty seconds (you, speaking)

"Most leaders I meet are good under pressure and paying for it later: short sleep, a short fuse, fog by mid-afternoon. When pressure hits, the body can stay braced, and the mind speeds up to match. I teach people to notice that and shift it, and we track it weekly so you can see it working. As Founder of Soma-Q, a nervous system alignment practice, I help high-performing leaders move from burnout to leading with energy, clarity and joy under pressure."

Two minutes (with the posters)

Walk the four visuals in order: the loop (what is happening), the shift (what to do about it), the outcomes (what changes), the body map (let them find it in themselves). Each one answers a single question a stranger would ask.

The four visuals: one question each

Poster (24 x 36 in)	Question it answers	What a stranger takes from it
The Pressure Loop	"What is actually happening to me?"	Pressure makes the body tighten, the mind speed up and the reaction feed the tension again, and there is a point where it can be interrupted. Rest alone does not touch this loop.
The Soma-Q Shift	"What would I do differently?"	Three questions: Notice, Locate, Choose. Concrete enough to try before leaving the booth.
What Changes	"What do I get out of it?"	Restored energy, focused clarity, and joy and fulfillment, held under pressure.
Where do you feel it first?	"Is this about me?"	An interactive body map. A dot sticker is a low-commitment reason to stop, and it opens the conversation without a pitch.

All four carry a small QR to the Burnout Signal Check, tagged by poster, so we can see which visual people scan from. The same loop is on the front of the take-home card.

▲ WHAT CAME FROM YOUR DRIVE, AND WHAT DID NOT

Rebuilt in the new brand, or left behind on purpose.

I opened your Social and Marketing folder and the Marketing Images folder inside it. Every graphic I looked at is in the old copper and teal look, and several carry language the new rules retire. I rebuilt the concepts rather than recoloring the files, because the structure of each one needed to change for a stranger.

Drive file	Decision	Why
somaq_pressure_loop_horizontal.png	REBUILT as Poster 1, on Banner 1, the backdrop and the card back	Same four ideas and the same "interrupt here". Now it reads top to bottom: Something happens, then the three-step loop, with the interrupt point on the arrow before the loop starts. Plain-language line under each step; copper removed.
Nervous System Shift / NS Activation to Shift	REBUILT as Poster 2	The original shows five stages plus a three-lens model on one page. For a stranger I kept the three questions (Notice, Locate, Choose) and your closing line. The IQ, EQ and SQ lens and the old footer ("Nervous System Performance Coaching for Leaders") are left out; "coaching" is retired.
SomaQ_Outcomes_Circle.jpg	REBUILT as Poster 3, Banner 2 and the backdrop	The original is a one-hour outcomes wheel for clinicians and practices (clinician retention, practice culture), so it speaks to a different audience. Rebuilt around your three outcomes for leaders: three circles inside the Soma-Q triangle, with a Q at the center.
Soma-Q_Breath_Retention_Graphic.png	LEFT OFF THE BOOTH	Three reasons: your rules say never single out breathwork as the offer; it makes physiology claims (oxygen delivery, circulation, stamina) that each need a verified source before public use; and it carries its own safety caveat. It suits a workshop or the platform, where the caveat and citations can sit beside it.
Soma-Q_Flyer_HalfSheet.png, Soma-Q_Ideal_Client.png, somaq_postcard_v4.png	DO NOT REUSE	They show "Founder & CEO" (the title is Founder only), "INTELLECTUAL" for IQ (the term is Cognitive), the line that sustained activation "is dangerous" (an unsupported claim), and the retired copper. They are useful as a record of what worked, not as print files.
Yerkes-Dodson curve, Window of Tolerance, Network Physiology, PNIE, Body to Brain Paradigm and the rest	NOT USED	Several look like third-party or stock images, so I did not reuse them without knowing their licensing. They also assume a reader who already knows the vocabulary. I can make a plain-language version of any one you want at a later booth.

How the dot-sticker poster works

Put the body-map poster on an easel at the front corner of the table, with a sheet of 3/4 inch round stickers beside it. Anyone can place a dot without talking to you. Your opening question to anyone who does is "What do you do next when it shows up?", which leads straight into the loop. This is my recommendation, not something I found evidence for; the earlier evidence table already notes that claims about

interactive booths are weakly supported, so count how many people place a dot and how many of those start a conversation, and keep it only if the numbers justify it.

Before the event: buy two colors of stickers (one for "me", one for "someone on my team", which doubles as the individual versus organization signal), a tabletop easel for each of two posters, and foam board or a similar mount for the other two if you will tape them to a wall or the backdrop. I have not found poster printing prices, so ask the printer for a quote on 24 x 36 in prints and mounting.

> **Language check on the new visuals.** The posters use "built to restore" and "designed to build", not promises. They do not say research proves anything, do not name breathwork, and do not use clinical or coaching language. "Pressure runs in a loop" is a plain-language framing taken from your own Pressure Loop graphic; if you want a research-supported statement of the mechanism on a printed piece, tell me and I will check it against the research citations master first.

▲ PRINT AND LIGHTING

Why the large pieces are now light, and what to ask the printers.

You raised two concerns about solid Deep Teal on the big pieces: cost, and how it looks in an artificially lit room with a concrete floor. Here is what I can and cannot say. I could not test either in a real venue, so treat the reasoning as general print practice, not measured fact.

Concern	What I know	What I did
Does dark ink cost more?	I could not confirm it. The vendor pages I found (FedEx, WSD, 4OVER4) price banners and throws by size, stand and fabric, not by color or ink coverage, but that is not a guarantee and some processes differ.	Moved the large pieces to light fields so the question may not matter. Ask each vendor the three questions below anyway.
Dark teal under venue lighting	Large flat dark fields tend to show banding, scuffs and fingerprints, and glare from overhead lights can turn a glossy dark panel into a mirror. On a gray concrete floor the dark rectangle also reads as a hole in the room. This is general print experience, not something I measured.	Linen field, Deep Teal type, a short Deep Teal band for the logo, Light Teal as the accent. Ask for a matte or low-gloss finish.
A "pop" of color	The palette has six colors and copper and gold are retired, so the brightest tone available is Light Teal.	Light Teal is used for the table cover, the interrupt callout, the circles and the triangle. If you want a brighter accent for events, that is a brand decision I would not make for you.

Three questions for every printer

1. Does heavy ink coverage change the price on this product?
2. Can the finish be matte or low-gloss, so overhead lights do not mirror on the banner or the QR codes?
3. Can I have a printed proof of the Deep Teal and the Light Teal before the full order?

▲ OUTCOME CHECK

Every headline, checked against your outcome-first rule.

Your rule is outcome, then stakes, then how, then proof, then the call to action, and no practice, framework or metric named without the outcome it serves. I went piece by piece and rewrote the ones that led with mechanism.

Piece	Headline now	Change
Banner 1	What if you could train your response to stress?	Kept (your wording). Adds "what we do" naming the three outcomes.
Banner 2	Built to restore your energy, clarity and joy under pressure.	New.
Table cover, backdrop	Burnout ends here.™ plus the outcomes line	Outcomes line added.

Loop poster	Interrupt the loop that drains your energy and clarity.	Was "Pressure runs in a loop", a mechanism headline. Now outcome plus stakes.
Shift poster	Choose your response instead of reacting.	Was "Three questions turn a reaction into a choice". Each step now ends with the outcome it serves.
What Changes poster	What this work is built to restore.	Kept; triangle and Q added.
Where do you feel it poster and card	Where do you feel pressure first? Something happens. Where do you feel it first?	An interactive hook. The line under it ties it to keeping energy and clarity.
Progress and capacity posters	Watch your progress, week by week. Capacity comes first. Results follow.	Proof pieces; outcome words already in the headline.
Card back	Interrupt the loop. Keep your energy and clarity.	Was "Pressure runs in a loop. You can interrupt it."
Leave-behind	Restore your energy and clarity, and build the skill to keep them. / Leaders and teams that keep their energy, clarity and connection under pressure.	Each program row names the outcome it is designed to build.

Verbs used throughout: restore, build, designed to, built to. None of "guarantee", "permanent" or "you will". "Burnout ends here.™" carries its trademark mark on every piece that uses it.

▲ FROM THE MEASUREMENT OVERVIEW

Proof, shown simply and honestly.

Your Measurement Overview is the strongest piece of proof Soma-Q has, because it answers the question a skeptical visitor and an HR buyer both ask: how would I know it worked? I took three things from it and left the rest in the document, where the full explanation belongs.

New piece	Audience	What it shows, and where it comes from
Poster: Watch your progress, week by week (24 x 36 in)	Everyone at the booth	The weekly view page of the Overview, redrawn for distance reading: twelve measures in four groups (Body, Emotion, Mind, Focus areas), each with a bar for Week 10 and a ring for the Week 1 baseline. Every figure is the Overview's own example, labeled as an example and not client data. It uses the plain-language measure names, not SQ- names.
Poster: Capacity comes first. Results follow. (24 x 36 in)	Everyone, and organizations in particular	The cause-and-effect idea and the Week 1, 6 and 12 summary table, drawn as a line chart to scale on a 0 to 10 axis. It says "the method taking hold" and "how you lead" rather than SQ-M and SQ-C, because only organizational buyers see the SQ- names. It carries the Overview's own caveat that capacity-first is a working expectation of the method, not a research finding.
Handout: Measurement at a glance (8.5 x 11 in, two sided)	Organizations: owners, HR and L&D	A condensed, forwardable version of the Overview: the attendance-versus-capacity opening, the SQ-LPMS with SQ-M and SQ-C, how data is collected, the ten measures, what the reports show, and the "what Soma-Q will and will not claim" list. The QR requests the full Overview. Uses the SQ- names, which your rules allow for this audience.

How they work at the booth

With an individual: point to the progress poster and say "this is what you would see every week, in your own numbers". It makes "measurement" concrete in ten seconds and answers the unspoken "how would I know". **With an owner or HR lead:** use the capacity poster ("we track the method taking hold separately from results, so a good quarter cannot hide strain"), then hand them the glance. Offer the full Overview by QR only if they ask for more, because eight pages is a lot to carry around.

What I kept faithful

- The example figures, the "example, not client data" labels, and the sentence that capacity-first is a working expectation, not a research finding.
- The claims list: the system is Soma-Q's own and not independently validated, scores are participants' own ratings, there are no promised percentage reductions, and not everyone sees the same change. I did not soften any of it.

- I left out the Overview's sentence about interoceptive accuracy and the Garfinkel citation, because it needs its reference printed beside it. Say so if you want it on the handout and I will add the reference.

> **Check before printing.** The two posters use the Overview's example numbers exactly as published in the PDF. I read the Week 1 baseline rings from the chart image because the PDF text does not list them; I confirmed them against the chart at higher zoom, but please compare the poster to page 4 of the Overview once. If the example numbers ever change in the Overview, they must change here too. The weekly check-in and Metrics Report wording follows your naming rules, but the Measurement Overview itself still names the retired "Triad" labels on its chart (SQ, EQ, IQ), which I did not carry over.

▲ WHAT THE EVIDENCE SAYS

Researched, with the confidence level stated.

I searched for evidence behind each major booth decision. Much of what circulates is vendor marketing repeated without a primary source, so each finding is rated by how well it is actually supported. Please verify anything you plan to quote externally.

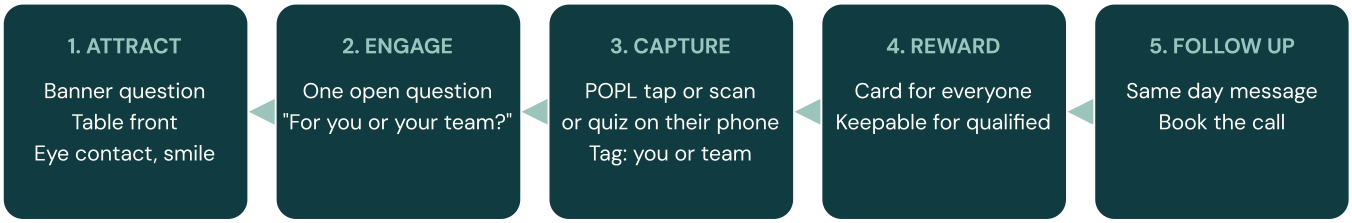

Question	What I found	Support	How we use it
Does fast follow-up matter?	The most cited speed finding is a 2011 Harvard Business Review study with MIT and InsideSales.com, reported through secondary sources, finding firms that contacted web leads within an hour were nearly seven times as likely to qualify them. It studied online leads, not event leads. Event-specific multipliers (3x, 6x, 9x) appear widely without sources.	MODERATE	Follow up the same day, and no later than 24 hours. Treat the exact multiplier as unproven.
Do most event leads go unfollowed?	A figure of roughly 80% never followed up is attributed to CEIR across many blogs, but I could not find the original report, and other sources give 70% or 20%. A 2013 CMO Council and E2MA survey reported only 6% of respondents said they converted tradeshow leads extremely well.	WEAK	Internal caution only. Do not quote the 80% figure publicly. The practical lesson, a written follow-up plan, stands either way.
Do promotional products work?	ASI's own studies (an industry trade body, so not independent) report about 85% recall of the advertiser, and that apparel and outerwear are kept longest. Item rankings differ between ASI editions (for example calendars rank last in one and longest in another). Pens and similar items are kept for months, not years.	MODERATE	Skip generic giveaways. Spend on one useful, visible keepable, and only for qualified contacts.
Does the three-second headline rule hold?	It is a design heuristic repeated by booth builders, not a measured finding. The advice is consistent: one headline stating the outcome, at eye level, with the primary message above crowd height.	HEURISTIC	One large question headline in the upper third of the banner.
Does interaction raise dwell time?	Directionally plausible and widely claimed. Multipliers such as 3 to 5 times and 50% more traffic cite no methodology. Baseline dwell at static booths is reported as roughly 10 to 60 seconds, also unsourced.	WEAK	The quiz on the visitor's own phone is the interaction. Measure our own dwell and conversion instead of relying on these numbers.
Can POPL and Nimble capture leads?	Popl states that it supports NFC and QR sharing, custom lead forms with consent boxes and qualifying questions, offline capture, card scanning, and sync to Salesforce, HubSpot, Zoho, Outlook and Zapier. Nimble documents an AI business card scanner in its mobile app and lists tags, smart lists and email sequences, though I could not confirm tags or sequences can be managed from the phone.	VENDOR CLAIMS	Popl is the primary capture tool. Nimble is the contact system of record. See the capture section for the verification list.

> **Plain conclusion.** No source I found proves a specific booth design wins. The defensible strategy is the one that is cheap to test: put a different tag on each printed piece, capture every conversation the same way, and keep only what produced leads at the next event.

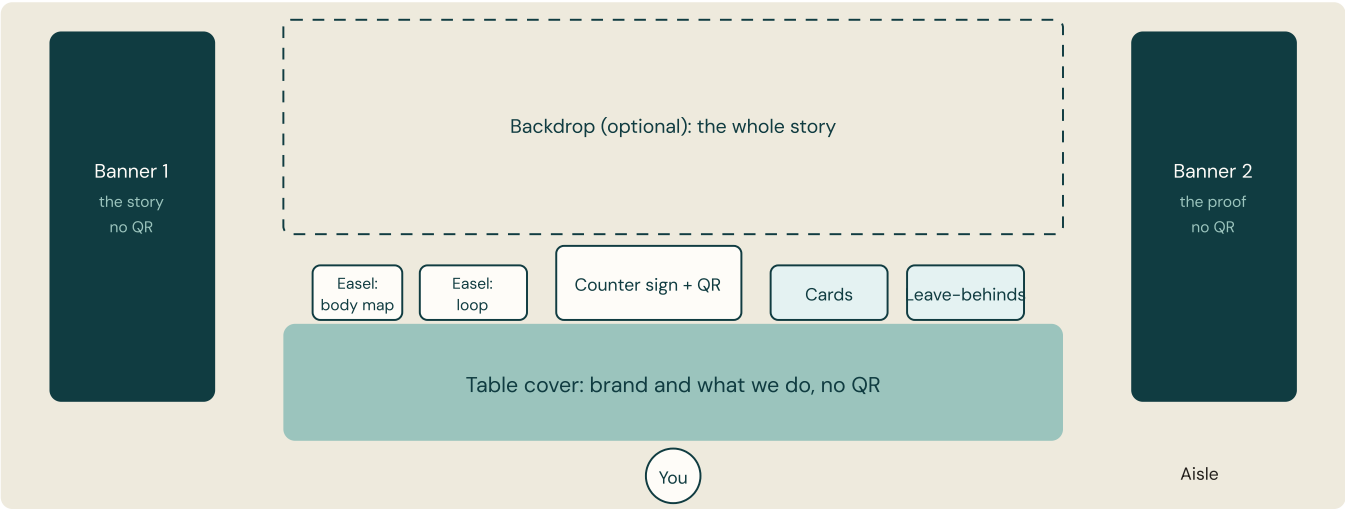

▲ STRATEGY

The conversion path.

Five steps, each with one job and one owner. The diagram shows where each printed piece and each tool sits.

Booth anatomy: where each piece goes

Everything that must be read sits above table height (30 in): the lower part of a banner or backdrop is hidden by the table and by people. Stand beside the table, not behind it; people approach open space more readily than a barrier. That is common booth practice, not a measured finding.

Written for how this audience talks

Design stays neutral so the booth reads as inviting to anyone, and the language does the work of connecting with men: direct sentences, the physical and practical signals (sleep, tension, heavy decisions, a short fuse), and the framing of pressure as something trainable. There is no self-care, glow or journey vocabulary on any piece. If the event data later shows an audience that is overwhelmingly men, a second card with one men-focused headline is a small, low-risk addition, and I would test it against the neutral card rather than replace it.

▲ MATERIALS AND BUDGET

Three tiers, so the essentials fit and the rest is optional.

The budget is $500 to $1,500 for print and swag together. Prices I found are "starting at" figures from vendor pages, not quotes, and I found none for posters, so the tiers below are about what to buy first, not a bill.

Tier	What	What I know about cost
1. Essentials	Banner 1 and Banner 2; table cover; counter sign (print two); take-home cards; business cards; two posters on easels (the loop and the body map) with dot stickers.	FedEx lists retractable banners from $189.99 each. A custom 6 ft table throw was listed from about $97 to $128 at WSD. Standard business cards from $21.99 for 250 at Staples; premium soft-touch costs more. Cards, signs and posters need quotes.
2. Strong add	The Working with Soma-Q leave-behind (short run); the shift and outcomes posters; the two measurement posters; the Measurement at a glance handout for organizational leads.	Letter-size printing is the cheapest line; poster prices are unknown.
3. If room allows	The backdrop; one earned keepable for qualified contacts.	Pop-up backdrops were listed from about $499 to $579; tumblers have minimums and a tight lead time (see Order Guide).

If the quotes come in over budget, cut from the bottom: Tier 3 first, then the measurement posters, then the shift and outcomes posters. Do not cut the banners, the counter sign or the cards.

What I recommend you do not buy

My judgment, not a finding: tri-fold brochures (they get recycled and cannot be tracked), generic pens and stress balls (short-lived, and a stress ball sends the wrong message for a nervous system practice), and any piece with no scannable next step.

The earned keepable

The strongest evidence in the promotional products literature is for items that are used often and seen by others, such as apparel, outerwear and drinkware. Those cost more per unit, so reserve them for people who give a contact or book a call. Option A is drinkware with a subtle logo and the URL only; option B is a small set of desk-friendly practice cards, which needs practices chosen from the Practice Library and checked against the research citations master first.

Brand and print rules for every piece

- Six colors only: Deep Teal #103C41, Light Teal #9BC4BD, Pale Teal #E4F2F2, Linen #EEEADD, Card White #FEFCF8, Ink #24211D. No gold, no copper. I did not convert these to CMYK or Pantone because I could not verify a match; ask for a printed proof.
- DM Serif Display for headings and DM Sans for body. Outline or embed fonts when exporting for print.
- Official logos only. Reversed logo on Deep Teal, teal logo on Linen or white.
- Trademark marks on first use per piece (Burnout Ends Here™, Shift Happens™, Presence Under Pressure™).
- No em dashes or en dashes, no coaching or clinical language, outcome-first headlines.

▲ CAPTURE SYSTEM

How POPL, Nimble and the quiz fit together.

Three capture routes feed one list. The aim is that every contact lands in Nimble with the same two tags, regardless of how it was captured.

Route	What is captured	Where it lands
1. Burnout Signal Check QR	First name, email, result tier, answers	The quiz's current capture (a Google Form per the website handoff). Needs a path into Nimble.
2. Free ebook QR	First name, email	The ebook signup (/api/ebook-signup, which the designer still has to build), then the PDF opens.
3. Weekly reset QR	Registration details, depending on where the QR points	Zoom registration or the Free Resources page. Decide which; registration is better because it captures an email.
4. Free discovery call QR	Name, email, time slot	Acuity booking, then Nimble. Highest intent: follow up first.
5. POPL tap or scan	Name, email, optional phone, for me or my team, consent	POPL, then a sync to Nimble (see checks below).

6. Paper cards and badges	Name, title, company, email, phone, address	Nimble directly, using the mobile business card scanner.

Launch dependencies. Four of these routes depend on the new site being live on soma-q.com by about October 19, so that every printed code can be scan-tested from a real proof: the /go/ redirects, the Burnout Signal Check, the ebook signup, and the contact form. The website handoff lists the ebook signup and contact form as items the designer still has to build. If any of them will not be ready, tell me and I will change that QR to a fallback destination before you print.

Tags to apply to every lead

Source tag
oct24 plus the route: quiz, ebook, reset, call, popl, card. (Matches the campaign slug in the QR links.)

Segment tag
individual or organization. The POPL qualifier and your own note after a conversation set this tag.

Setup checklist, do all of it before the event

- **POPL lead form.** Fields: name, email, "I am here for: myself / my team / just learning", an optional phone number, and a consent checkbox for email follow-up. Add a separate, unchecked consent for text messages if you intend to text.
- **POPL to Nimble.** POPL lists Salesforce, HubSpot, Zoho, Outlook and Zapier as sync options and does not list Nimble by name in the sources I found. **Verify** whether a Zapier connection to Nimble exists on your plans, and test one lead end to end. If it does not, plan to export the POPL leads to a spreadsheet the same evening and import them into Nimble.
- **Quiz to Nimble.** The quiz posts to a Google Form. Decide whether Nimble imports from that sheet, or whether your platform build replaces the quiz capture with a direct lead capture. Until then, plan a manual import on the same evening.
- **Nimble tags and sequences.** Create the tags and the five-message follow-up sequence on the desktop site ahead of time. I could not confirm they can be managed from the phone app, so do not plan to build them at the booth.
- **Test on the real devices.** Reviewers report NFC tap problems on some older phones, so the counter sign always carries the QR as well as the tap instruction. Bring a charger and a battery pack, and confirm offline capture works without venue wi-fi.
- **Test every QR** on a phone on cell data, from the printed proof, before the final print order. The quiz and contact routes must be live on the final site.

Consent. Collect email only with an explicit opt-in, and get a separate opt-in before sending marketing texts (ask your attorney to confirm the wording and your obligations). The quiz is for adults 18 and older, and the event is adults only, so no minors-specific handling is built into the booth.

▲ AT THE BOOTH

Conversation script and follow-up.

Open with a question, not a pitch

- "What part of your week runs you down the most?"
- "When the pressure spikes, what do you notice first: your body, your head, or your temper?"
- "Is this something you are dealing with yourself, or for a team you lead?"

Then, in this order

1. Listen for one specific cost (sleep, decisions, a short fuse, energy by mid-afternoon).
2. Name it back in one plain sentence, tied to the outcome: restored energy, focused clarity, joy under pressure.
3. Offer the next step that fits: the quiz for an individual, the overview for an organization.
4. Capture it right there: "Tap my phone and I will send it to you now."
5. Give the card. If it is a real conversation, offer the keepable and book the call on the spot.

Stay inside the scope

Soma-Q is an education and training practice. In conversation: do not diagnose, do not promise results ("clients report" and "designed to" are the verbs), and do not describe the work as therapy or treatment. If someone describes a medical or mental health crisis, listen, say this is outside what you do, and point them to a licensed provider.

Credibility in one line

"I am the Founder of Soma-Q, a nervous system alignment practice. Before that I spent thirteen years as a healthcare technology executive."

Follow-up cadence

When	What
Same day	Short email or text: nice to meet you, the thing we talked about, the link they asked for.

Day 1 to 2	The Burnout Signal Check link if they have not taken it, or the organizations overview.
Day 4	One useful idea, not an ask.
Day 8	Invite to the weekly Shift Happens reset (Wednesdays, 12:00 PM Mountain).
Day 14	Direct invitation to book a discovery call.

The speed target of a same-day first touch rests on moderate evidence (see the evidence table). The remaining timing is my recommended starting cadence and is meant to be adjusted after the first event.

How we will know it worked.

I am not setting numeric targets, because I could not find a trustworthy benchmark for a first-time booth in this category and an invented one would mislead you. Record these, then set targets for the second event from your own results.

Measure	How to get it
Conversations held, leads captured, capture rate	Tally sheet at the booth; leads from the tracker
Leads with a valid email and consent	Tracker columns
Scans per printed piece	The quiz and contact links carry `utm_content` per piece (banner, sign, card, orgsheet)
Calls booked, calls held, clients signed	Acuity and Nimble, at 7, 30 and 90 days
Cost per lead and cost per booked call	Total print and swag spend divided by each count

Decision rule for next time: keep a printed piece only if its tag shows scans or if conversations point to it; drop or redesign any piece with neither.

▲ PRODUCTION BRIEF FOR DESIGNERS AND PRINTERS

Specifications.

Piece	Trim and bleed	Notes for the printer
Banners 1 and 2	32 x 80 in trim (FedEx's listed size), file at 33 x 81 in (0.5 in bleed). Confirm against the vendor template.	The bottom 12 in sits in the stand base. A 30 in table hides the lower part of the banner, so everything that must be read is in the upper 54 in. Matte or low-gloss finish; printed proof of both teals.
Backdrop (optional)	120 x 90 in placeholder, file at 121 x 91 in. Confirm against the vendor template (frame, curve, panel seams).	All critical content is in the top 60 in (a 30 in table hides the lowest 30 in); the lower band is only the sign-off. No QR on this piece.
Table cover front	72 x 30 in trim as a placeholder, file at 73 x 31 in. Confirm against the vendor template.	No QR by design. Check which part of the cover is visible once the table is set.
Six posters	24 x 36 in trim, file at 24.25 x 36.25 in (0.125 in bleed). Portrait.	Satin or matte paper. Mount two on easels (foam board) and hang or tape the others. Each carries a small QR in the lower right.
Counter sign	8.5 x 11 in trim, file at 8.75 x 11.25 in.	Matte stock or an acrylic stand with a matte insert, so lighting does not glare over the QR codes.
Take-home card	4 x 6 in trim, file at 4.25 x 6.25 in. Two sides.	Heavier card stock, matte or soft-touch. Four QR codes at 0.84 in each; do not shrink them.
Business card	3.5 x 2 in trim, file at 3.75 x 2.25 in. Two sides.	Soft-touch or matte, no gloss over the QR. Keep text 0.2 in from trim.
Working with Soma-Q, Measurement at a glance	8.5 x 11 in trim, file at 8.75 x 11.25 in. Two sided each.	Heavyweight paper, short runs.

QR codes

- All codes are vector, Deep Teal on white, error correction level M, with a quiet zone. Do not recolor, stretch or place over imagery.
- Keep every code at or above the size supplied. Codes are listed with their addresses in output/qr_urls.txt.
- The default mode points every code to a stable soma-q.com/go/ address you can redirect later; the redirect list for your designer is in output/redirects_for_designer.md. If those routes are not live before printing, rebuild in direct mode.

Proof checklist before approving any print order

- Search each PDF for the character "[": no placeholder may print.
- Official logo, at full resolution, on every piece; colors match on the printed proof.
- Every QR scanned from the printed proof on two different phones.
- No text within 0.375 in of trim (0.25 in on the cards). Fonts embedded.
- No em dashes, no coaching or clinical language, trademark marks present.

Formatting checks already run

Every piece was rendered and checked by a script for text running outside its sheet, text overlapping other text or a QR code, text clipped by its box, content running into the call-to-action block, a piece spilling onto a second sheet, leftover placeholders, and dash characters. I also looked at every page by eye. The script caught the leave-behind running under its call-to-action and the counter sign spilling to a second page; both are fixed. It cannot judge taste, so please look at the gallery yourself.

Open decisions and items to verify.

Item	Status
Price and what you say when asked	The biggest open item (see Think like a buyer). Decide the sentence, and whether to print a range.
Photo on Banner 2 and the backdrop	Your call. Both versions are built. I found no evidence a founder's photo raises booth conversion, so this is judgment; the site opens with your photo, so using it keeps the booth consistent.

Booth size, sponsor deadlines	Needed only to confirm table and backdrop sizes with vendors.
Full-resolution logos and photo	The logos are now the original 1378 px files from Drive. Your photo is the web-size copy, fine for the banner but too small for the backdrop. Tell me which headshot to pull.
POPL QR image	Export it from the POPL app into assets/.
The /go/ redirects, ebook signup and contact form	Your designer must have these live before printing; otherwise tell me and I will print direct addresses.
Weekly reset link	Currently the Zoom meeting join link, which does not capture an email. A registration page would.
Discovery call link	Waiting for the new Replit /book link.
POPL to Nimble sync	Verify and test with one lead.
Vendor templates	Banner, table cover and backdrop need the vendor's template before final export.
Research sentence on printed pieces	Not printed until each kind of claim is confirmed Verified in the Research Citations Master.
Earned keepable	Your decision after unit pricing.

Sources.

I retrieved these through search and did not read every one in full. Several are vendor blogs; the statistics in them vary and should be checked against primary sources before being quoted.
